9914	D5916	Ocular Prosthesis	Synonymous terminology: artificial eye, glass eye. A prosthesis, which artificially replaces an eye missing as a result of trauma, surgery or congenital absence. The prosthesis does not replace missing eyelids or adjacent skin, mucosa or muscle. Ocular prostheses require semiannual or annual cleaning and polishing. Also, occasional revisions to re-adapt the prosthesis to the tissue bed may be necessary. Glass eyes are rarely made and cannot be re-adapted.	5710

9916	D5915	Orbital Prosthesis	A prosthesis, which artificially restores the eye, eyelids, and adjacent hard and soft tissue, lost as a result of trauma or surgery. Fabrication of an orbital prosthesis requires creation of an original mold. Additional prostheses usually can be made from the same mold, and assuming no further tissue changes occur, the same mold can be utilized for extended periods of time. When a new prosthesis is made from the existing mold, this procedure is termed an orbital prosthesis replacement.	7994

9918	D5914	Auricular Prosthesis	Synonymous terminology: artificial ear, ear prosthesis. A removable prosthesis, which artificially restores part or all of the natural ear. Usually, replacement prostheses can be made from the original mold if tissue bed changes have not occurred. Creation of an auricular prosthesis requires fabrication of a mold, from which additional prostheses usually can be made, as needed later (auricular prosthesis, replacement).	6281
9919	D5932	Obturator Prosthesis, Definitive	Synonymous terminology: obturator. A prosthesis, which artificially replaces part or all of the maxilla and associated teeth, lost due to surgery, trauma or congenital defects. A definitive obturator is made when it is deemed that further tissue changes or recurrence of tumor are unlikely and a more permanent prosthetic rehabilitation can be achieved; it is intended for long-term use.	2250
9920	D5913	Nasal Prosthesis	Synonymous terminology: artificial nose. A removable prosthesis attached to the skin, which artificially restores part or all of the nose. Fabrication of a nasal prosthesis requires creation of an original mold. Additional prostheses usually can be made from the same mold, and assuming no further tissue changes occur, the same mold can be utilized for extended periods of time. When a new prosthesis is made from the existing mold, this procedure is termed a nasal prosthesis replacement.	5710

9924	D5931	Obturator Prosthesis, Surgical	Synonymous terminology: Obturator, surgical stayplate, immediate temporary obturator. A temporary prosthesis inserted during or immediately following surgical or traumatic loss of a portion or all of one or both maxillary bones and contiguous alveolar structures (e.g., gingival tissue, teeth). Frequent revisions of surgical obturators are necessary during the ensuing healing phase (approximately six months). Some dentists prefer to replace many or all teeth removed by the	1278

			surgical procedure in the surgical obturator, while others do not replace any teeth. Further surgical revisions may require fabrication of another surgical obturator (e.g., an initially planned small defect may be revised and greatly enlarged after the final pathology report indicates margins are not free of tumor).

9927	D5953	Speech Aid Prosthesis, Adult	Synonymous terminology: prosthetic speech appliance, speech aid, speech bulb. A definitive prosthesis, which can improve speech in adult cleft palate patients either by obturating (sealing off) a palatal cleft or fistula, or occasionally by assisting an incompetent soft palate. Both mechanisms are necessary to achieve velopharyngeal competency. Generally, this prosthesis is fabricated when no further growth is anticipated and the objective is to achieve long-term use. Hence, more precise materials and techniques are utilized. Occasionally such procedures are accomplished in conjunction with precision attachments in crown work undertaken on some or all maxillary teeth to achieve improved aesthetics.	891
9928	D5710	Rebase Complete Maxillary Denture	rebase complete maxillary denture	743
9929	D5952	Speech Aid Prosthesis, Pediatric	Synonymous terminology: nasopharyngeal obturator, speech appliance, obturator, cleft palate appliance, prosthetic speech aid, speech bulb. A temporary or interim prosthesis used to close a defect in the hard and/or soft palate. It may replace tissue lost due to developmental or surgical alterations. It is necessary for the production of intelligible speech. Normal lateral growth of the palatal bones necessitates occasional replacement of this prosthesis. Intermittent revisions of the obturator section can assist in maintenance of palatalpharyngeal closure (termed a speech aid prosthesis modification). Frequently, such prostheses are not fabricated before the deciduous dentition is fully erupted since clasp retention is often essential.	891

9961	D5951	Feeding Aid	Synonymous terminology: feeding prosthesis. A prosthesis, which maintains the right and left maxillary segments of an infant cleft palate patient in their proper orientation until surgery is performed to repair the cleft. It closes the oral-nasal cavity defect, thus enhancing sucking and swallowing. Used on an interim basis, this prosthesis achieves separation of the oral and nasal cavities in infants born with wide clefts necessitating delayed closure. It is eliminated if surgical closure can be affected or, alternatively, with eruption of the deciduous dentition a pediatric speech aid may be made to facilitate closure of the defect.	652

9988	D5937	Trismus Appliance (Not For Tmd Treatment)	Synonymous terminology: occlusal device for mandibular trismus, dynamic bite opener. A prosthesis, which assists the patient in increasing their oral aperture width in order to eat as well as maintain oral hygiene. Several versions and designs are possible, all intending to ease the severe lack of oral opening experienced by many patients immediately following extensive intraoral surgical procedures.	564
9989	D5936	Obturator Prosthesis, Interim	Synonymous terminology: immediate postoperative obturator. A prosthesis which is made following completion of the initial healing after a surgical resection of a portion or all of one or both the maxillae; frequently many or all teeth in the defect area are replaced by this prosthesis. This prosthesis replaces the surgical obturator, which is usually inserted at, or immediately following the resection. Generally, an interim obturator is made to facilitate closure of the resultant defect after initial healing has been completed. Unlike the surgical obturator, which usually is made prior to surgery and frequently revised in the operating room during surgery, the interim obturator is made when the defect margins are clearly defined and further surgical revisions are not planned. It is a provisional prosthesis, which may replace some or all lost teeth, and other lost bone and soft tissue structures. Also, it frequently must be revised (termed an obturator prosthesis modification) during subsequent dental procedures (e.g., restorations, gingival surgery) as well as to compensate for further tissue shrinkage before a definitive obturator prosthesis is made.	1256
9990	D5935	Mandibular Resection Prosthesis Without Guide Flange	A prosthesis which helps guide the partially resected mandible to a more normal relation with the maxilla allowing for increased tooth contact. It does not have a flange or ramp, however, to assist	4298

			in directional closure. It may replace missing teeth and thereby increase masticatory efficiency. Dentists who treat mandibulectomy patients may prefer to replace some, all or none of the teeth in the defect area. Frequently, the defect's margins preclude even partial replacement. Use of a guide (a mandibular resection prosthesis with a guide flange) may not be possible due to anatomical limitations or poor patient tolerance. Ramps, extended occlusal arrangements and irregular occlusal positioning relative to the denture foundation frequently preclude stability of the prostheses, and thus some prostheses are poorly tolerated under such adverse circumstances.	
9991	D3999	Unspecified Endodontic Procedure, By Report	Used for procedure that is not adequately described by a code. Describe procedure.	1035
9992	D2650	Inlay - Resin-Based Composite - One Surface	inlay - resin-based composite - one surface	250
9993	D5934	Mandibular Resection Prosthesis With Guide Flange	Synonymous terminology: resection device, resection appliance. A prosthesis which guides the remaining portion of the mandible, left after a partial resection, into a more normal relationship with the maxilla. This allows for some tooth-to-tooth or an improved tooth contact. It may also artificially replace missing teeth and thereby increase masticatory efficiency.	8564
9994	D5958	Palatal Lift Prosthesis, Interim	Synonymous terminology: diagnostic palatal lift. A prosthesis which elevates and assists in restoring soft palate function which may be lost due to clefting, surgery, trauma or unknown paralysis. It is intended for interim use to determine its usefulness in achieving palatalpharyngeal competency or enhance swallowing reflexes. This prosthesis is intended for interim use as a diagnostic aid to assess the level of possible improvement in speech intelligibility. Some clinicians believe use of a palatal lift on an interim basis may stimulate an otherwise flaccid soft palate to increase functional activity, subsequently lessening its need.	2194

9998	D5927	Auricular Prosthesis, Replacement	Synonymous terminology: replacement ear. An artificial ear produced from a previously made mold. An implantable biocompatible material generally onlayed upon an existing bony area beneath the skin tissue to fill in or collectively raise portions of the overlaying facial skin tissues to create acceptable contours. Although some forms of pre-made surgical implants are commercially available, the facial augmentation is usually custom made for surgical implantation for each individual patient due to the irregular or extensive nature of the facial deficit.	5000
10003	D5924	Cranial Prosthesis	Synonymous terminology: Skull plate, cranioplasty prosthesis, cranial implant. A biocompatible, permanently implanted replacement of a portion of the skull bones; an artificial replacement for a portion of the skull bone.	3932

Fabrication of an interim ocular prosthesis generally implies subsequent fabrication of an aesthetic ocular prosthesis.	2569
